

Where will spray foam take you next?

By Anna Lockhart.

Discover the advantages of choosing spray foam roofing for your next project.

[General Coatings](#), the industry leader for spray foam roofing solutions, offers contractors a range of high-quality and durable products that can transform any commercial or residential project. With quality in mind, their spray foam roofing products are ideal for new construction or retrofit projects. With spray foam roofing solutions in your arsenal, there's no limit to where your success may grow!

Spray foam roofing is the wise choice for existing structures, requiring no tear-off demolition of the existing roofing to be removed. Instead, the spray foam roofing system is simply applied over the existing roofing, eliminating the need to do the tedious work of removing and disposing of old materials. During the retrofit process with spray foam, owners can be rest assured that there are fewer risks to the structure from weather and the elements, a concern that would be majorly possible in the case of traditional replacements. The speedy and efficient nature of spray foam application ensures that the project can be done quickly without sacrificing precision and care.

A fantastic choice for those looking for a watertight solution that will endure for decades, spray foam can be a fantastic option that doesn't break the bank. Incredibly customizable due to the flexible nature of the application, spray foam can be easily applied to a building's custom and unique features, such as changes in slopes for drainage and minimizing ponding areas.

Considering your options for the roofing materials for a new construction build? Spray foam is a fantastic solution that provides leak-proof performance while simultaneously offering low operating costs for owners due to the product's seamless nature. Self-flashing and eco-friendly, spray foam roofing is an ideal solution for those environmentally conscious and looking for an all-in-one solution!
